

The Federal Communications Commission

Dear The Federal Communications Commission,

I do not want to pay more than my fair share for my telephone service! The flat fee proposal you are now considering would make contributions made to the Universal Service Fund unfairly applied. I want to be able to continue to afford my current service.

It is not fair to apply the same charge to small users (residential, and small business users(as you do to people who make a large volume of calls , or that you apply to larger businesses. This is unfair.

WE use our wireless phone for safety, security and convenience. WE do not want to lose these benefits or subsidize big businesses and large volume users. I urge you to reject this proposal and leave the system as it is.

Fair is fair.

Sincerely,

Robert McCloughan
